

Document Archiving Solution

Efficient, automated and future-proof document archiving for Dynamics 365

With the new Document Archiving Solution from Everware, you can archive your business documents, such as sales invoices, automatically and securely - directly in your Azure cloud. Ideal for companies that want to archive documents in an audit-proof manner, automate them or integrate them into other cloud processes.

When creating a supported report - such as a sales invoice - a PDF is automatically generated.

A batch job saves this PDF in an Azure Blob Storage container defined by you.

The solution runs in the background - seamlessly integrated into your Dynamics 365 environment.

Automated & time-saving

Reports are archived without manual intervention.

Scalable cloud integration

Use Azure functions, automations and external integrations.

Compliance & traceability

Secure storage of your documents in accordance with internal or legal requirements.

Future-proof

Ideal for companies that are already working with Azure or are on their way there.
